## Fractions

**Materials:** game board, 8 counters for each player, fraction cards

### Directions:

Each player gets 8 transparent counters in two different colors. (one player takes all of one color and the other player takes all of another color). Player 1 draws a card and puts a counter on the fraction represented on the card. Player 2 does the same thing. If either player draws and gets a fraction card that is already covered by his/her opponent, he/she can tell the player to "move it" and put his/her counter on that number. The player who uses all his/her counters first wins the game.
